Amy's Flashchards - Name that guitar chord.

This drill is designed to help you learn basic guitar chords. When you see an open circle above the top fret of a certain string understand that this string is played with none of your fingers touching it (an open string). When an "x" appears above the top fret of a certain string it means that you don't play that string. The muting of that string is usually achieved by allowing one of your fingers to rest against it so it will not vibrate. Point to a chord and try to say its name. Then left mouse click on the chord to see the answer. If the drill seems too hard for you, break it into smaller sections. For example, just drill yourself on the top row. Once mastered, start adding chords from row two (and so on). Don't forget to print the PDF file so you can also study without a computer. OK, let's get to work!
